South Jakarta, Indonesia

PROFESSIONAL SUMMARY

Results-driven **Network & IT Infrastructure Engineer** with **3+ years** of hands-on experience in enterprise server administration, virtualization (VMware ESXi, Proxmox VE), Cisco networking, and AIoT/Autonomous Drone systems. Proven track record managing **10+ IBM enterprise servers**, supporting **500+ users**, and maintaining **99%+ system uptime**. Designed an on-premise **AI server infrastructure** (4 dedicated servers, NVIDIA H200 NVL GPU node) sized for **100,000–150,000 active users**, from capacity planning and RAB through vendor RFQ. Adept at bridging hardware, edge systems, and network infrastructure for high-reliability environments. Actively targeting **Network Engineer**, **IT Infrastructure Engineer**, and **HPC/AI Infrastructure Engineer** roles.

TECHNICAL SKILLS

Networking & Protocols:	Cisco IOS, OSPF, BGP, EIGRP, VLAN, STP, EtherChannel, TCP/IP, DNS, DHCP, NAT, SSH, VPN, VRRP, GLBP, Load Balancing, Layer 2/3 Switching, Network Segmentation
Server & Virtualization:	VMware ESXi (vSphere), Proxmox VE, Hypervisor Management, VM Provisioning, Windows Server, Active Directory (ADDC), NAS Storage, RAID, NVMe, iDRAC9, IBM System Servers, Dell PowerEdge, Apache Guacamole
Data Center & HPC Infra:	Dell PowerEdge R760xa, NVIDIA H200/H100 GPU Servers, AI Server Architecture, Capacity Planning, High Availability (HA), Rack & Power Design (A/B PDU), Budget Planning (RAB), BOM/RFQ & Vendor Evaluation, Enterprise Storage Architecture
IoT & Embedded Systems:	ESP32, ArduPilot, MAVLink, PX4, Flight Controllers, GPS (M10Q), MQTT, WebSockets, CGNAT Bypass, Firmware Integration, Flutter (IoT App)
Autonomous Systems / AIoT:	UAV/Drone System Design, VTOL (QuadPlane / Tilt-Rotor), Real-Time Video Telemetry, Edge AI Integration, RF Protocol Optimization
OS, Tools & Languages:	Linux (Ubuntu Server), Windows Server, Bash, Python, Wireshark, Docker, Git, FFmpeg | **English:** TOEIC 770/990 (Professional Working)

PROFESSIONAL EXPERIENCE

IoT Engineer & Server Manager (Contract)
Jan 2026 – Present

Mitra Teknologi Gemilang (MTG) — *Depok, Indonesia*

- Lead SaveMe! server infrastructure: 4-server stack with an **NVIDIA H200 NVL** AI node, rack network, RAB and vendor RFQ.
- Engineered autonomous drone systems (ArduPilot/MAVLink) for real-time crowd monitoring and riot detection at large-scale events, achieving reliable HD video and sub-200ms telemetry transmission.
- Developed end-to-end AIoT data pipelines integrating embedded systems (ESP32, M10Q GPS, Flight Controllers) with cloud databases via WebSockets, bridging field hardware with centralized server infrastructure.
- Spearheaded VTOL R&D (QuadPlane/Tilt-Rotor designs), transitioning from standard multirotors to enhance aerodynamic efficiency and extend autonomous patrol duration by ~40%.
- Optimized Command & Control (C2) networks with custom RF protocols to maintain robust, low-latency command links in high-RF-interference environments.

IT Infrastructure & Network Engineer (Freelance)
Jun 2024 – Present

Lembaga Pengembangan Komputerisasi (LePKom), Gunadarma University — *Depok, Indonesia*

- Managed and monitored **10+ IBM System enterprise servers**, maintaining **99%+ uptime** and high availability through proactive monitoring and rapid fault resolution.
- Installed, configured, and maintained **50+ Virtual Machines and containers** across VMware ESXi (vSphere) & Proxmox VE hypervisors.
- Built a secure remote desktop environment using Apache Guacamole integrated with Active Directory Domain Controller (ADDC) for centralized student access.
- Provided end-to-end IT support for **500+ students**; prepared and deployed **100+ PCs and 100+ thin clients**, including OS rollout, app configuration, and network IP provisioning.

- Developed an IoT server room monitoring system (temperature, humidity, smoke) using ESP32 and Bardi smart devices with custom Flutter remote app.

Network Course Instructor & Person In Charge (Part-Time) Oct 2023 – Present

Lembaga Pengembangan Komputerisasi (LePKom), Gunadarma University *Depok, Indonesia*

- Delivered comprehensive Cisco networking instruction to **100+ learners per semester**, covering OSPF, BGP, EIGRP, VLANs, switching, TCP/IP, DNS, and network security.
- Led hands-on lab sessions configuring and troubleshooting Cisco routers and switches aligned with CCNA/CCNP industry standards.
- Authored official practical training module series (Fundamental, Beginner, Intermediate) for Cisco routing, switching, and network security for VmLePKom.

IT Infrastructure Core System & Broadcast (Internship) Feb 2024 – Jun 2024

CNN Indonesia (Trans Media) *Jakarta, Indonesia*

- Implemented and administered **Windows Server Active Directory Domain Controller (ADDC)** for centralized authentication and Group Policy management across the broadcast infrastructure.
- Configured and maintained high-throughput **NAS storage** for centralized video file sharing, access permissions, and automated backups supporting live 24/7 broadcast operations.
- Drafted the Broadcasting Resources Installation Manual and resolved server/network outages with zero broadcast interruption.

Network Engineer (Internship) May 2021 – Sep 2021

Pushansiber Bainstrahan, Ministry of Defence (Kemenhan RI) *Jakarta, Indonesia*

- Designed and implemented **load-balancing and redundancy solutions** using Cisco technologies (VRRP, GLBP) for national cyber-defense infrastructure.
- Contributed to the Pushan Siber national cyber-defense network topology and built secure Data Center network infrastructure.
- Configured and integrated **10+ Local Area Networks (LANs)** across client-server environments with SSH hardening, NAT, and VLAN segmentation.

KEY PROJECTS

AI Server Infrastructure Architecture — "SaveMe!" Platform 2026

- Designed a 4-server on-premise stack (General, AI, Realtime, Storage) sized from per-service CPU/RAM/GPU/disk estimates for **100,000–150,000 active users**, with capacity tiers planned up to 1M.
- Rebalanced the AI node from storage to compute: 2x 32-core Xeon, 512 GB DDR5 ECC, **NVIDIA H200 NVL 141 GB**, NVMe RAID 1, cutting its estimated cost ~25% while adding 1.76x GPU memory and a GPU/RAM upgrade path.
- Planned the network and rack: L3 core switch with LACP-bonded SFP28 links and VLANs, isolated 1G iDRAC management network, dual A/B PDU power; prepared the RAB and a brand-neutral BOM/RFQ for multi-vendor quotes.

Smart Tactical Body Camera — Undergraduate Thesis 2025 – 2026

- Engineered IoT tactical body-worn camera with ESP32-CAM and M10Q GPS, bypassing CGNAT via WebSocket Client Push Mode for low-latency video streaming to Node.js backend with FFmpeg evidence chain preservation.

VmLePKom Infrastructure Containerization & Modernization 2024 – 2025

- Migrated legacy multi-user Windows & Ubuntu VM environment into lightweight, isolated **Docker** containers, significantly slashing compute overhead for 500+ concurrent students.

EDUCATION & CERTIFICATIONS

Master of Electrical Engineering — Information Technology (S2) — Gunadarma University, Depok 2026 – Present

Bachelor of Computer System (S1) — Gunadarma University, Depok Sep 2022 – Sep 2026

GPA: **3.89 / 4.00** | Recipient of **Full Academic Scholarship**

Diploma in Computer System (D3) — Gunadarma University, Depok · GPA **3.89 / 4.00** Sep 2022 – Aug 2025

Vocational High School (TKJ) — SMK Perguruan Cikini, Jakarta Aug 2019 – Aug 2022

Graduated as **Best Student / Highest Score** in Computer & Network Engineering major

Certifications: BNSP: Computer Network Engineering (2022), Junior Network Computer Technician (2025), System & Network Administration (2026) • TOEIC 770/990 (2022) • Computer Engineering Training (P2KPTK2, 2022)
